

CONTENTS

Vol. 45 No.1 March 2014

1. Geosynthetic-Reinforced Soil Structures for Railways: Twenty Five Year Experiences in Japan
by *F. Tatsuoka, M. Tateyama, J. Koseki and T. Yonezawa*
2. Enhancement of Rail Track Performance through Utilisation of Geosynthetic Inclusion
by *Buddhima Indraratna, Sanjay Nimbalkar, and Cholachat Rujikiatkamjorn*
3. Railway Track Transition Dynamics and Reinforcement Using Polyurethane GeoComposites
by *P. Woodward, O. Laghrouche and A. El-Kacimi*
4. How to Overcome Geotechnical Challenges in Implementing High Speed Rail Systems in Australia
by *H. Khabbaz and B. Fatahi*
5. Maintenance Model for Railway Substructure
by *Ali Ebrahimi, James M. Tinjum, and Tuncer B. Edil*
6. Dynamic Behaviour of Railway Ballasted Track Structures in Shaking Table Tests and Seismic Resistant Performance Evaluation in Japan
by *T. Ishikawa, S. Miura and E. Sekine*
7. Mechanical Properties of Polyurethane-Stabilized Ballast
by *A. Keene, J.M. Tinjum, and T.B. Edil*
8. Dependency of Cyclic Plastic Deformation Characteristics of Unsaturated Recycled Base Course Material on Principal Stress Axis Rotation
by *A. Inam, T. Ishikawa, and S. Miura*
9. Quickness Test Approach for Assessment of Flow Slide Potentials
by *V. Thakur and S. A. Degago*
10. Cement Stabilization for Pavement Material in Thailand
by *S. Horpibulsuk, A. Chinkulkijniwat, A. Suddeepong, and A. Neramitkornburee*
11. Stone Columns Field Test: Monitoring Data and Numerical Analyses
by *Marcio Almeida, Bruno Lima, Mario Riccio, Holger Jud, Maria Cascão, Felipe Roza*

Technical Note:

1. Numerical Analysis of Response of Geocell Confined Flexible Pavement
by *G. L Sivakumar Babu and Ram Babu*

Vol. 45 No.2 June 2014

1. Numerical Investigation of Passive Loads on Piles in Soft Soils
by *C. Moormann and J. Aschrafi*
2. Numerical Simulation of an Energy Pile Using Thermo-Hydro-Mechanical Coupling and a Visco-Hypoplastic Model
by *Xiaolong Ma, Gang Qiu, Jürgen Grabe*
3. Numerical Studies on Dynamic Load Testing of an Open-ended Pipe Pile and a Case Study
by *L. Phan Ta, T. Matsumoto and H. Nguyen Hoang*
4. Performance of Piled Raft Foundation Subjected to Strong Seismic Motion
by *K. Yamashita, T. Hashiba, H. Ito and T. Tanikaw*

5. Static Cyclic Load Tests on Model Foundations in Dry Sand
by Y.S.
6. Pile Tip Shape on Soil Behaviour Around Pile
by Y. Wu and H. Yamamoto Unsever, T. Matsumoto, S. Shimono and M.Y. Özkan
7. Axial Bearing Behaviour of a Model Pile in Sand Under Multiple Static Cycles
by J. H. Hwang, Z. X. Fu, P. Y. Yeh, D. W. Chang
8. Seismic PBD of Piles from Monte Carlo Simulation Using EQWEAP Analysis with Weighted Intensities
by D.W. Chang, Y.H. Lin, H.C. Chao, S.C. Chu and C.H. Liu
9. Case Studies on Response of Laterally Loaded Nonlinear Piles
by Wei Dong Guo
10. Numerical Analysis of the Effect of Shaking Table Test on Superstructure-foundation-Ground System in Liquefiable Soil and Its Numerical Verification
by F. Zhang, R. Oka, Y. Morikawa, Y. Mitsui, T. Osada, M. Kato and Y. Wabi
11. Model Loading Tests on Bearing Behaviour of a Group Pile and Ground Deformation in Sand
by S. Aoyama, B. Liu, L. Danardi, W. Mao, S. Goto and I. Towhata
12. Numerical Study on the Bearing Behaviour of Pile Groups Subjected to Lateral Pressure due to Soil Movements
by O. Reul, J. Bauer and C. Niemann
13. Deep Foundation Systems for High-rise Buildings in Difficult Soil Conditions
by R. Katzenbach and S. Leppla

Vol. 45 No.3 September 2014

Part I: Centrifuge-based Physical Modeling

1. Centrifuge Modelling of Improved Ground
By M. Kitazume, Y. Morikawa and S. Nishimura
2. Simulation of Soil Movement in Geotechnical Centrifuge Testing – Deep Excavations, Tunnelling, Deposit
By D. König, O. Detert and T. Schanz
3. Run-out of Sensitive Clay Debris: Significance of the Flow Behavior of Sensitive Clays
By V. Thakur and D. Nigussie
4. Verification of the Generalized Scaling Law for Flat Layered Sand Deposit
By T. Tobita, S. Escoffier, J. L. Chazelas and S. Iai
5. Performance of Rail Embankments Constructed with Coal Ash as a Structural Fill Material: Centrifuge Study
By B.V.S. Viswanadham and V.K. Mathur
6. Field Scale Tests for Determination of Pullout Capacity of Suction Pile Anchors Under Varying Loading Conditions
By Vijaya Ravichandran, R. Ramesh, S. Muthukrishna Babu, G.A. Ramadass, .M.V.Ramanamoorthy and M.A. Atmanand

Part 2: Contributed Papers

7. A Novel Mobile Information System for Risk Management of Adjacent Buildings in Urban Underground Construction
By Hanh Quang Le and Bin-Chen Benson Hsiung
8. Comparison Between Design Methods Applied to Segmental Tunnel Linings
By N.A. Do, D. Dias, P.P. Oreste, I. Djeran-Maigre

9. Challenging Construction Projects Related to Urban Tunnels
By *R. Katzenbach and S. Leppla*
10. Bulk Compression of Dredged Soils by Vacuum Consolidation Method Using Horizontal Drains
By *Hiroshi Shinsha and Takahiro Kumagai*
11. Mechanical Behavior of Energy Piles in Dry Sand
By *A.M. Tang, J.M. Pereira, G. Hassen, N. Yavari*
12. Estimating Side Resistance of Bored Pile in Residual Soils
By *Mutiasani Dianmarti Kusuma and Eng-Choon Leong*
13. Seismic Response of Geosynthetic Reinforced Earth Embankment by Centrifuge Shaking Table Tests
by *W.Y. Hung , J.H. Hwang , C.J. Lee*

Vol. 45 No.4 December 2014

1. Recent Advances in Seabed Liquefaction and Its Implications for Marine Structures
By *B. Mutlu Sumer*
2. Eulerian–Lagrangian Modeling of Current-Induced Coastal Sand Dune Migration
By *R. Sun, J. Wang, Y. Sakai and H. Xiao*
3. Numerical Study of the Penetration Mechanism and Kinematic Behaviour of Drag Anchors Using a Coupled Eulerian-Lagrangian Approach
By *Haixiao Liu and Yanbing Zhao*
4. Cyclic Pore Pressure Generation in Silty Soils under the Action of Combined Waves and Current
By *Yi-Fa Wang, Fu-Ping Gao, and Wen-Gang Qi*
5. A Model for Predicting Pipeline Sinkage Induced by Tunnel Scour
By *Chengcai Luo, Hongwei An, Liang Cheng and David White*
6. Predicting Spudcan Extraction Resistance in Soft Clay
By *Omid Kohan, Christophe Gaudin, Mark J. Cassidy, and Britta Bienen*
7. FE Procedure for Foundation design of Offshore Structures – Applied to Study a Potential OWT Monopile Foundation in the Korean Western Sea
By *H.P. Jostad, G. Grimstad, K.H. Andersen, M. Saue, Y. Shin, and D. You*
8. Compressibility as an Indicator of Liquefaction Potential
By *M. Murat Monkul, Poul V. Lade, Ehsan Etmnan, Aykut Senol*
9. Centrifuge Modelling of the Seismic Responses of a Gently Sloped Liquefiable Sand Deposit Confined within Parallel Walls
By *C.J. Lee, W.Y. Chung, and W.Y. Hung*
10. Eulerian Finite Element Analysis for Uplift Capacity of Circular Plate Anchors in Normally Consolidated Clay
By *Z. Chen, K. K. Tho, C. F. Leung and Y. K. Chow*
11. Restoration Method of Artificial Tidal Flat by Use of Pressure Injection of Slurry Dredge Clay
By *Takahiro Kumagai, Takashi Tsuchida, Changjin Ko and Hiroaki*
12. Tsunami-Seabed-Structure Interaction from Geotechnical and Hydrodynamic Perspectives
By *S. Sassa*
13. Feature Storey on “Challenges in the Design of Tall Building Foundations”
By *Harry G. Poulos*
